# Features

VINMOVER focuses on maximizing profits and addressing the risks and complexities facing Auto Carriers today.

By coordinating, automating and streamlining the highly diverse operational and logistics activities while providing clear visibility to goals and issues Auto Carriers can satisfy customers, minimize costs and Maximize Profits by standardizing with the VINMOVER suite of tools.

## OEM & EDI Integrations

Customers coordinate with their carrier fleets via E.D.I. and where the general information that goes back and forth is similar, the exact structure and format can vary.

## Accounting

As the work is scheduled and vehicles are delivered, accounting generates invoices, records cash receipts, pays all the bills, and ensures payroll accuracy.

## Dispatch

Ability to visualize and deploy the fleet in ways that keep the trucks moving, accommodates drivers while addressing customer needs and priorities.

## Claims and incident Processing

Easy to use claims processing and driver incident management. All processed claims in system are accessible to the driver or manager in their mobile app

## "E.P.O.D." compliant Driver Mobile App

VINMOVER's bilingual mobile application gives the driver everything needed to select a load and work that load, all in the palm of their hands.

## Built in Safety

Restrict drivers access to specific OEM's, locations, or vehicle models from drivers with poor safety and quality scores.

# Differentiation and Competitive Advantage

**Software serves the business, not the other way around.**

Business is tough, competitive, and risky. Great businesses leverage their unique capabilities to differentiate themselves with their customers, proving their ability to provide the best quality services at the most competitive pricing.

Data needs to flow, systems need to integrate and the software needs to support the current processes, people, and procedures that your company uses to most effectively support your unique business advantage, situation and circumstances.

Software should not change a company, it should help the company preform the current activities better, assisting in streamlining the activities that work, and providing tools to address the activities that require closer management.

When your business needs to change, your software needs to be adjusted accordingly.

## Independent copies of VinMover

VinMover is ready to make those unique modifications to support your corporate evolution. Each VinMover customer use an independent copy of our software and customizations made exclusively for one customer are not shared with other customers, ensuring the VinMover software fits your organization perfectly providing a competitive advantage differentiating your services from the competition.

- Auto Carriers run their business across a wide expanse of geography with a workforce that is mainly remote.
- Any change to the companies systems or procedures can be a huge disruption without proper coordination and mutually agreed upon timing.
- By running an independent copy of VinMover for each customer, we ensure that improvement changes can be coordinated with each customers to ensure minimal operational disruption.
- Independent copies of VinMover also ensure your data is your data.
- Additionally, customers with specific hardware, performance, redundancy or security needs can be accommodated.

# Integrations

## Improve efficiency and increase customer satisfaction

Data needs to flow to the organization and through the organization and out of the organization to partners. Data must be handled in a way that provides maximum benefit while minimizing the effort and disruption to parties that participate with the organization. To achieve this Vinmover integrates with many other systems and companies allowing data to flow between partners, employees and systems ensuring information is effectively leveraged to the benefit of the operation. Data coming from your customers and partners should automatically flow into your computers and phones for quick analysis to identify actionable items driving efficient logistics and effective business processing.
